

The Pink Hip Kit®

Postless Hip Arthroscopy Positioning System

- Eliminates risk of nerve injury and protects delicate skin from tears and pressure injury in the groin
- Postless approach requires shorter traction time, makes distraction easier, and improves C-arm visualization to allow for a more complete dynamic exam
- Significantly reduces postoperative pain and recovery times
- Requires no change to your surgical technique
- Affords a greater range of motion during surgery making complex procedures easier
- DermaProx™ Boot Liners reduce the risk of nerve injury in the foot and ankle
- Reduces healthcare system cost burdens
- Kits available for various tables
- Patented technology

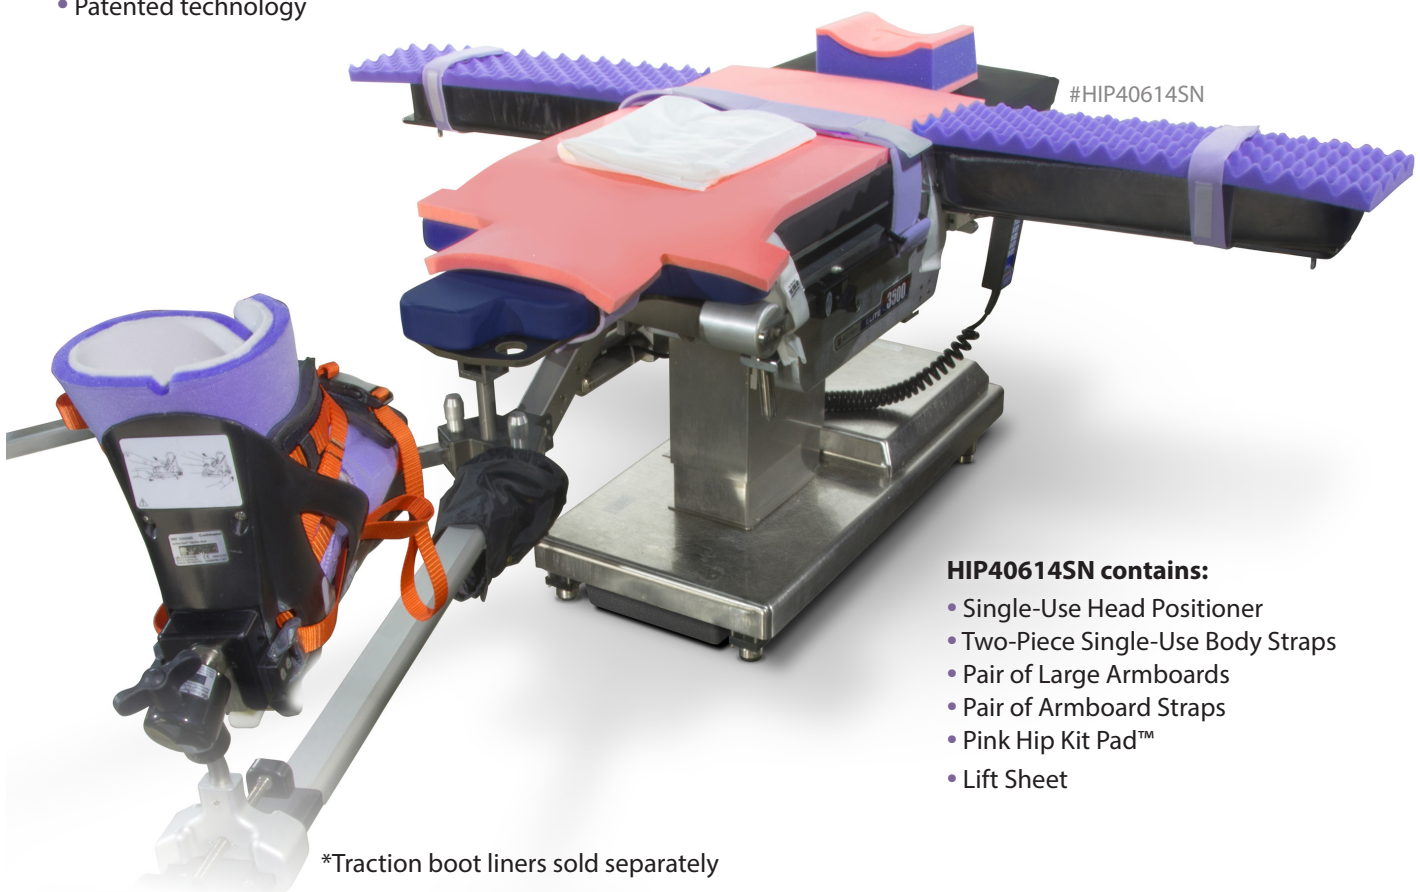

GO POSTLESS

Prevent Pressure-Related Injury to the Perineum during Hip Arthroscopy

“The nice thing with a postless system is that it truly prevents skin and nerve damage to perineum. Hip arthroscopy typically takes from 1-2 hours to perform...and large amounts of pressure is applied to the perineum area that can be associated with skin injury and nerve injury and can happen as high as 30-35%. If you can eliminate the post, you can actually reduce that complication to the perineum down to 0%.”

Joshua D. Harris, MD

*Associate Professor of Orthopedic Surgery
Institute for Academic Medicine*

*Traction boot liners sold separately

HIP40614SN contains:

- Single-Use Head Positioner
- Two-Piece Single-Use Body Straps
- Pair of Large Armboards
- Pair of Armboard Straps
- Pink Hip Kit Pad™
- Lift Sheet
