

Hip Arthroscopy & Fracture Kit

Maximize patient safety during arthroscopic hip procedures

- Patented Pink Pad material is specially designed to prevent patient movement throughout the procedure while protecting against skin breakdown and HAPIs – avoiding preventable injuries and CMS Never Events
- Unique material creates friction between the table and the patient's body which allows for the perineal post to be removed, eliminating the risk of perineal nerve damage and pressure injury while still allowing proper positioning and safe access to the joint

The Xodus Medical kit eliminates patient movement during hip replacement procedures. The material is soft against the skin and is breathable. Anything that minimizes risk of a pressure ulcer, especially with our elderly patients, is a welcomed benefit. I highly recommend this product.
